

A dual-monitor computer setup on a dark desk. The left monitor displays a line chart with a fluctuating upward trend and a bar chart below it. The right monitor shows a large area chart with a jagged, mountain-like shape and a bar chart at the bottom. The scene is lit with warm, golden light, and autumn leaves are visible in the foreground and background.

# US Banks Loan Applications – 5 Year HMDA Analysis

Based on HMDA (Home Mortgage Disclosure Act) data – New York sample

Prepared by Ishita Arora

# Data Source & Methodology

## Dataset Overview

- **Source:** HMDA loan application data (2018–2022)
- **Volume:** ~2 million applications from New York
- **Coverage:** 1,633 unique applicants across financial institutions

## Technical Architecture

- Star schema with fact table + dimensional models
- Power Query for data cleaning & transformation
- DAX measures for comprehensive KPI calculations

# Data Processing Challenges

## Performance Issues

Dataset size created 30+ minute refresh times, requiring optimization strategies and selective column inclusion to maintain dashboard responsiveness.

## Data Quality Concerns

Raw HMDA data contained missing entries, inconsistent coding, and fragmented denial reasons requiring extensive harmonization efforts.

## Schema Limitations

Applicant data complexity prevented full integration into star schema, requiring standalone modeling approach for demographic analysis.

# Executive Summary: Key Performance Indicators

2M

Total Applications

Loan applications processed  
across five-year analysis  
period

68%

Approval Rate

Successfully approved and  
funded mortgage  
applications

1M

Loans Funded

Mortgage loans successfully  
originated and disbursed to  
borrowers

1,633

Unique Applicants

Individual borrowers  
represented in New York  
dataset

The analysis reveals strong loan conversion efficiency with the majority of approved applications resulting in successful funding across the study period.

# Mortgage Application Trends: 2018-2022

1

## 2018-2019

Baseline application levels with steady, consistent mortgage demand across traditional lending channels.

2

## 2020-2021 Peak

Dramatic surge driven by historically low interest rates and pandemic-related financial uncertainty, creating unprecedented demand.

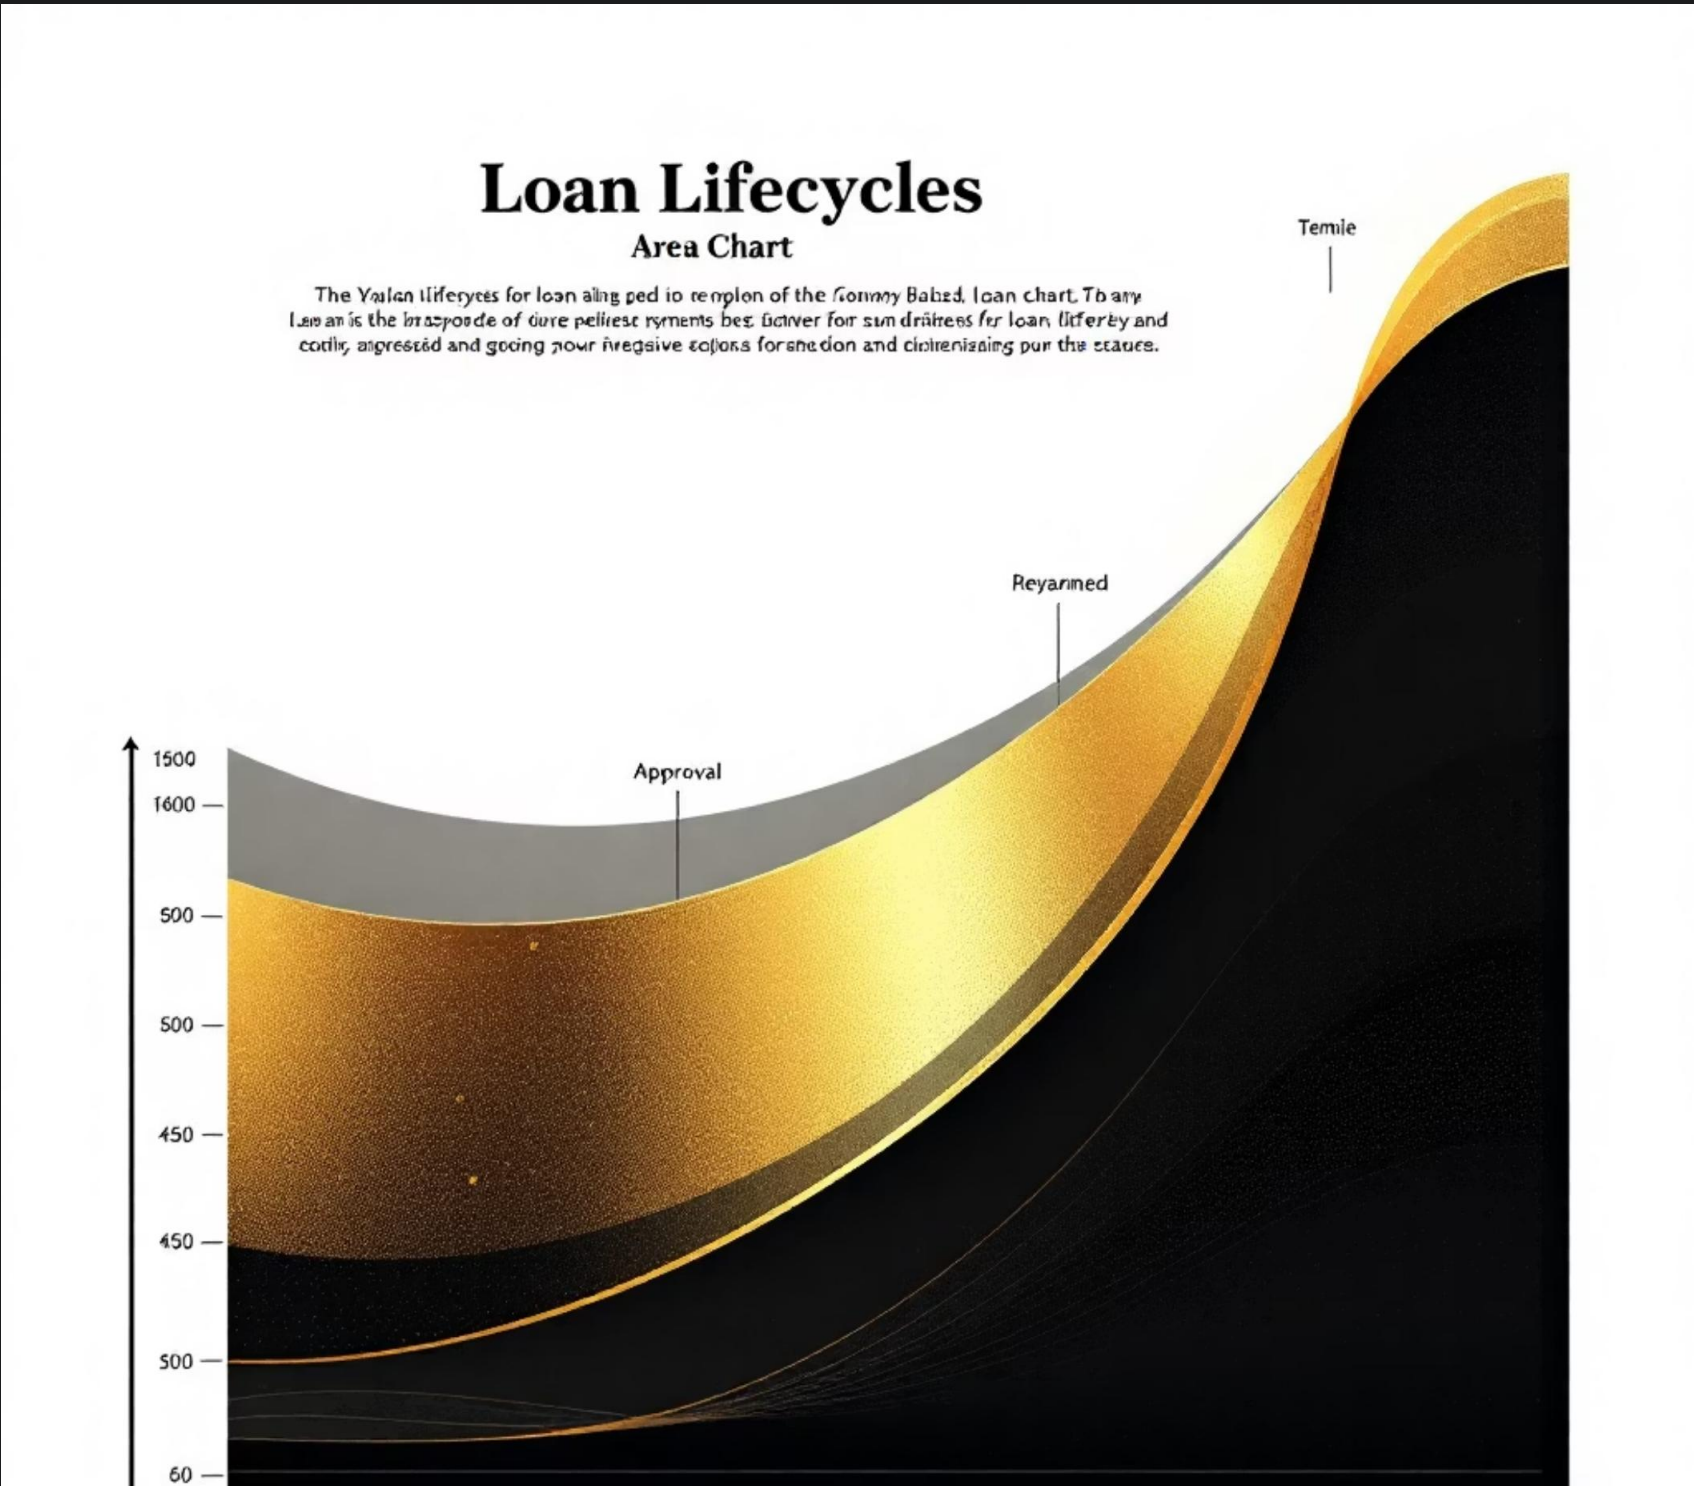

3

## 2022 Stabilization

Market correction with applications returning to normalized levels as rates increased and economic conditions stabilized.

# Loan Lifecycle Analysis

## Key Insights

- Originated loans represented the majority during peak demand
- Approvals not funded remained consistently low (~5%)
- Denial and withdrawal rates stabilized around one-third of total activity
- Strong conversion efficiency from approval to funding

# Borrower Demographics: Age Distribution Insights

## 20s: Entry Level

Fewest applications due to limited income, credit history, and down payment capacity in early career stages.

## 40s-50s: Peak Demand

Highest application volume driven by established careers, family responsibilities, and optimal home ownership timing.

## 60s+: Declining Activity

Reduced applications reflecting retirement income constraints and completed housing transitions in later life stages.

This demographic pattern aligns perfectly with typical life cycle financial needs and mortgage market expectations.

# Denial Analysis: Primary Risk Factors

# Loan Purpose Analysis

## Home Purchase

Dominated applications during stable periods, representing primary market activity for first-time and move-up buyers seeking housing stability.

## Refinancing

Surged dramatically during 2020-2021 low interest environment, as existing homeowners capitalized on rate opportunities.

## Home Improvement

Steady minority share, typically driven by property value enhancement and renovation financing needs.

The strong correlation between loan purpose and demographic life stages validates our age-based application patterns and market timing insights.

## Strategic Recommendations & Future Enhancements

## Immediate Opportunities

- **Geographic expansion:** Scale analysis across all US states for national insights
- **Applicant integration:** Full demographic modeling within star schema
- **Interactive mapping:** Drill-through capabilities for regional analysis

## Key Findings

- 68% approval rate demonstrates healthy lending standards
- Credit and DTI remain primary risk factors
- Life cycle patterns drive application timing
